

COP 4934 – Summer 2026

Group 11

Meeting Agenda

Date: July 7, 2026

Time: 4:00 pm

1. **Upcoming Due Date: Monday 7/27 – Final Design Report**
2. Next Professor Check-In: Tuesday 7/21 3:20 pm
3. Class Schedule: Tuesday 7/7, Thursday 7/9 (last lecture)
4. No-Lecture Weeks: 7/14 + 7/16; 7/28 + 7/30 (although the Final Design Report is due on Monday 7/27)
5. Sprint Review – Preliminary Design Document
 - i. Review what was accomplished in the Sprint.
 - ii. What has changed?
 - iii. What to do next?
 - iv. Adjustments to the Product Backlog?
6. Sprint Retrospective – Preliminary Design Document
 - i. What went well during the Sprint?
 - ii. What problems were encountered?
 - iii. How were the problems solved or not solved?
 - iv. Any changes that would make improvements?
7. Daily Scrum – created a Discord channel
 - i. **Inspect** progress toward the Sprint Goal.
 - ii. **Adapt** the Sprint Backlog as necessary, adjusting the upcoming planned work.
8. Discuss historical data collection status.
9. Contract addenda items:
 - i. KDE optimization alternative
10. Discuss upcoming assignments (refer to table below).
 - i. Discuss upcoming Final Design Report (see assignment description below)
 - ii. Sprint Planning for the Final Design Report
 - Sprint Goal
 - Product Backlog
 - Team to refine the backlog

COP 4934 – Summer 2026

Group 11

Meeting Agenda

Table 1: Senior Design 1 - Assignments

Due Date	Assignment	Individual/ Group	Description
6/20/2026	Journal – Week 2	Individual	Individual weekly progress report
6/22/2026	Design Proposal and Team Contract	Group	See below for submission requirements
6/27/2026	Journal – Week 3	Individual	Individual weekly progress report
6/29/2026	Early Status Report	Group	See below for submission requirements
7/6/2026	Journal – Week 4	Individual	Individual weekly progress report
7/6/2026	Preliminary Design Document	Group	See below for submission requirements
7/11/2026	Journal – Week 5	Individual	Individual weekly progress report
7/18/2026	Journal – Week 6	Individual	Individual weekly progress report
7/25/2026	Journal – Week 7	Individual	Individual weekly progress report
7/27/2026	Final Design Document	Group	DISCUSS DURING FUTURE MEETING

- Final Design Report
 - Keep in mind, this submission will count for everyone in your Senior Design Project Teams group.
 - General Requirements
 - 20 pages per person
 - Much of the content should already be done in your individual design documents. You may reuse that content freely.
 - You need twenty pages, per team member, of **substance**. Graphics are fine, large sparse graphics are not.
 - Most graphics must be quarter-page at most, with half-page reserved for very complex figures or screenshots with a lot of information.
 - Don't include source code without a good reason--and there's no good reason to include more than small chunks.
 - You may not have large amounts of whitespace for a section break - bring the section onto the page or edit previous paragraphs to let the section break fall within the last quarter of a page.

- This document is by definition incomplete, but it should be in coherent form. Sections may be incomplete, but individual items should be complete and reasonably well-edited.
- Final Document Outline
 - Front matter (**does not** count toward page count) Cover page with the project title, group number, team members, and sponsor information
 - Table of contents (your word processor can automatically generate this - **let it**). *The table of contents counts toward the page count up to three pages.*
 - Executive summary: a **one-page** description of the project, objectives, and technical approach
 - Introduction
 - Identification of the project, significance, and motivation - you can reuse or expand your individual motivation segments here.
 - Broader societal impacts of your project - consider any impacts on or implications for under-represented groups, the disabled, the environment, participation in STEM, national security, general education, etc.
 - Legal, ethical, and privacy issues related to your project - include how you dealt with any specifics that arose, along with any recommendations, best practices and warnings for the later use or expansion of your work.
 - Project characterization
 - Objectives and goals
 - Specifications and requirements, including user stories
 - Concept of operations
 - Design documentation
 - Research and investigation process - the outline of this will be unique per project. Include information about all technical decisions and why they were made; include supporting data, figures, etc.
 - Design summary with diagrams
 - Block, use-case, and activity diagrams at a minimum; ERD required if you have a database
 - Detailed description of design
 - Build/prototype/test plan Include current test results

- Conclusions
 - Characterization of results
 - Summary of Project
- Administration
 - Budget and financing with full tables and charts
 - Product backlog with user stories, current sprint backlog with user stories, and full milestone chart along with description of schedule and setbacks
- Acknowledgments (**does** count toward page count)
 - Descriptions of assistance provided by sponsors and others
 - Descriptions of unique facilities and equipment
 - Bibliography
- Appendix/Appendices (**does not** count toward page count)
 - Copyright permissions
 - Other referenced documentation as necessary
- Final Document-Specific Mechanics
 - All figures (including tables, code segments, etc.) must be cited in the body of the text, and the citation must appear **before** the element.
 - All figures must be captioned with a name, number and description.
 - Any figure you use that you didn't create has to include an assertion of permission to use it in the caption; include the actual authorization in the appendices.
