

COP 4934 – Summer 2026

Group 11

Meeting Notes

Date: July 21, 2026

Time: 3:30 pm

1. Mentioned upcoming due date for Final Design Document is this Monday 7/27.
Group agreed to target completing their sections by **late night Sunday 7/26**.
2. Group will hold our last meeting for this semester sometime next week after the Final Design Document is submitted. This meeting will serve as our Sprint Review of Final Design Document and will be used to discuss our plans for the break between the Summer and Fall semesters.
3. Phillip mentioned that Lee County granted permission for the group to use the public API. However, during the check-in meeting the Professor requested that we explicitly describe how we plan to use the public API and to request permission for that usage.
4. Discussed how the check-in meeting went. The check-in meeting was very brief (about 5-minutes). The Professor discussed the following:
 - i. He asked that we reach out to the County and explain exactly how we plan to use the public API and request permission based on that proposed usage.
 - ii. He asked that we briefly describe what the project application will do.
 - iii. He asked each of us what we're planning to contribute to the project.
5. Went over the outline spreadsheet "Final Design Document_outline.xlsx" for the Final Design Document that was posted to Discord on Wednesday 7/15 (go to the "final-design-report" channel).
6. Went over the 4 document templates listed below that were posted to Discord on Wednesday 7/15 (go to the "final-report-template" channel).
 - i. FDD_Introduction and Project Characterization.docx
 - This is mainly cut/pasted from previous assignment submittals. Each group member should review their sections and make changes as needed.
 - There are a few new sections in this template (e.g. Executive Summary). Refer to the outline spreadsheet to see what new sections have been assigned to you.
 - Phillip will coordinate with everyone about the Executive Summary. The Executive Summary will be completed last (likely on Sunday).
 - ii. FDD_Design and Testing Section.docx
 - Page count should total to at least 13-pages for this document. Let the group know if you are having difficulty reaching that page count ASAP.

COP 4934 – Summer 2026

Group 11

Meeting Notes

- iii. FDD_Conclusions Section.docx
- iv. FDD_Administration Section.docx
- 7. Discussed protocol for using the templates so that formatting will be consistent between group members and to reduce the likelihood of issues when combining everyone's write-up into a single document.
 - i. Remove 1st person references (except for the "Motivations" section).
 - ii. Create captions for figures/tables/equations, and use references when referring to figures/tables/equations in the body of the document (refer to instructions on Page 1 of FDD_Introduction and Project Characterization.docx template).
 - iii. A good practice for checking formatting errors that occur with headers is to look at the "Document Map" pane view. Go to the "View" tab, then check the "Navigation Pane" box, then select the "Document Map" sub-tab (it won't be labeled, need to hover over the sub-tab to see the label) in the Navigation Pane.
 - iv. Before sending your documents, check formatting by using Microsoft Word's auto-generation feature for the Table of Contents, Table of Figures, and Table of Tables. Formatting errors will often show up when creating these tables.
Don't include a Table of Contents, Table of Figures, or Table of Tables in the final document that you post to Discord.
 - v. Check page count targets in the outline spreadsheet.

Action Items:

1. (Everyone) Write your sections of the Final Report Document corresponding to the templates and outline that was discussed during the meeting. Templates and outline were posted to Discord on Wednesday 7/15 (go to the "final-report-template" channel).
2. (Phillip) Coordinate with everyone to write the Executive Summary.
3. (Phillip) Send second email to the Lee County Public Information Office requesting permission to use their public API. This time, explain in detail how we plan to use the public API.
