

COP 4934 – Summer 2026

Group 11

Meeting Notes

Date: June 23, 2026 (Refer to agenda [dated incorrectly for 6/22/2026])

Time: 3:00 pm

Location: Library (Room 389)

1. Decided as a team for Tolga to add the database to his primary role (in addition to the API). JC (who was originally on the database role) will take on the Registered User Statistics/Report generation for the front-end and will have the backend as a secondary role with Tolga as the lead.
2. Tolga won't be in class on Tuesday 6/30. He will attend the team meeting virtually.
3. Discussed the upcoming Early Status Report assignment that's due on Monday 6/29/2026. Recent Team Contract requests that we complete assignments 1-day prior to deadline.
4. Discussed group check-in with professor from earlier in the day. We described how data has been collected to the professor. The professor requested that we not use the search api to collect historical data without permission from the County. We discussed with the professor the different features that the app will include. Asked the professor what the 10-page per person for the Preliminary Design Document will consist of. He said research that has been done over the past few weeks should be documented in the report. Asked the professor about the sprint backlog write-up for the Early Status Report. The sprint backlog section should consist of sprint backlogs to date (even for tasks related to this semester's reports) and the product backlog that's anticipated for the remainder of the project.
5. Discussed upcoming Early Status Report (due on 6/29/2026). Draft outline will be developed and finalized by Wednesday night so we can start working on it as early as Thursday for those who want to (reminder that there is no class this Thursday).
6. Discussed upcoming Preliminary Design Document (due on 7/6/2026). This will be a long document (10-pages per person). Determined which topics each person will be responsible for writing. Below are the main topics for each team member:
 - i. Andrew: User workflow and general animation; DBSCAN
 - ii. Khoa: Front-End Mapping and UI
 - iii. Tolga: API +Database
 - iv. JC: Registered User Statistics/Reports
 - v. Phillip: Heat map (KDE/G_i*)
7. Discussed how DBSCAN, KDE, and G_i* would be displayed on the map and how they could affect the schema.

Action Items:

1. (Everyone) Collaborate to create an outline and assign team members to different sections of the Early Status Report assignment (finish by **Wednesday 6/24/2026**).
2. (Phillip and Andrew) Develop product backlog for the project. Print out sprint backlogs afterwards.

COP 4934 – Summer 2026

Group 11

Meeting Notes

3. (Everyone) Complete their section of the Early Status Report by **Sunday 6/28/2026**.
4. (Phillip) Combine everyone's sections into a single document for the Early Status Report by **Monday 6/29/2026**.
5. (Tolga, Andrew, and Phillip) Temporarily stop running search API script until getting permission from the County.
6. (Phillip) Contact the County to request permission to use their public search API per the frequency written in Tolga's script.
