

COP 4934 – Summer 2026

Group 11

Meeting Agenda

Date: June 9, 2026

Time: 4:00 pm

Location: Library (Room 370B)

1. Status on data request Tolga made to Lee County of 5/28/2026. Discuss if any additional actions should be taken.
2. Discuss plan for running script to collect historical data.
3. Discuss plan and timeline for future database for when storage of current database is insufficient.
4. Discuss potential restrictions for database access. Discuss backup options.
5. Discuss upcoming assignments for the project (there are no active assignments as of 6/8/2026).
6. Main App Analyses
 - i. HDBSCAN (Hierarchical Density-Based Spatial Clustering of Applications with Noise) for clustering
 - ii. KDE (Kernel Density Estimation) for heat map
 - iii. Getis-Ord G_i^* (aka G-i-star) for statistical validation of hot spots
7. Discuss outline of report and identify documentation that should be considered at this stage of the project.
 - i. General outline document
 - ii. Lee County API and data attribute summary
 - iii. Project procedure for collecting historical data from County's database
 - iv. Project procedure for daily data refresh from County's database
 - Note that we have no way of guaranteeing that all new data is retrieved because of the 1,000 record limit. Could we check and record how many new records are added at each data refresh? That way we could support the argument that once per day is typically adequate.
 - v. Algorithm description of HDBSCAN, KDE, and G_i^*
